

In the Specification

Please amend the paragraph on page 2, lines 13-23 as follows:

As used herein, “nefopam” refers to a compound of formula 1

(1)

and salts, e.g. the hydrochloride, metabolites and prodrugs thereof, as well as the (+) and (-) enantiomers which are as far as possible optically pure. (+)- Nefopam may be ~~preferred~~ preferred, for reduced side-effects caused by interaction.

Please amend the paragraph on page 3, lines 16-25 as follows:

Nefopam may be used according to the invention when the patient is also being given another anti-emetic agent. Such agents include phenothiazines, 5HT₃ receptor antagonists, dopamine antagonists, anticholinergic agents, anti-histamines, histamine analogues, cannabinoids, corticosteroids, GABA receptor antagonists, NK₁ receptor antagonists, and α_2 and α_3 adrenoceptor antagonists. Specific examples of these types of compounds are cyclizine, dolasetron, granisetron, ondansetron, tropisetron, nabilone, scopolamine, cinnarizine, promethazine, betahistine, ~~dexamethasone~~ dexamethasone, methylprednisolone, metoclopramide, chlorpromazine, perphenazine, prochlorperazine, thiethylperazine, droperidol, domperidone and haloperidol.
